Dear Hiring Manager,

I am writing to apply for the Software Engineer I – Integration Platform role. As a Computer Science undergraduate at Chitkara University with hands-on experience building scalable backend systems and microservices, I am excited about the opportunity to contribute to your integration platform.

Currently, as a Software Engineer Intern at Silverpush, I have architected and developed high-performance backend services in Go, focusing on scalability, observability, and distributed system design. My work includes building RESTful APIs for real-time analytics, designing microservices for email delivery and theme extraction, and implementing structured logging systems to improve debugging and tracing across services. These experiences have strengthened my ability to design reliable, production-grade systems.

I have also built projects such as a cloud-based development platform and a distributed movie booking system, where I implemented microservices using gRPC, integrated Elasticsearch and Redis for performance, and designed pluggable architectures for extensibility. This aligns closely with the challenges of building robust integration platforms that handle complex data flows and external system interactions.

I am particularly interested in this role because of its focus on building scalable integrations and infrastructure. I enjoy working on systems that connect multiple services, optimize performance, and improve developer and user experiences.

I would welcome the opportunity to contribute my skills and continue learning in a fast-paced engineering environment. Thank you for your time and consideration.

Sincerely,
Anshik Singh
